INTRODUCTION

A unique cloud based hospital management system for both patients and hospital staff (Doctors, Management). The primary target of this design is to make hospital understanding better than we presently have. It is a place where no one freely wants to visit but there are times when we want to. We are working to design such a system that will reduce a lot of paperwork and save peoples time.

Hospital management software (HMS) should be updated and different modules are added into this system for making that more profitable. For making it more specific, registration of new patients, management of outpatients and inpatients, billings, providing medicines, etc. are catered under the included system intended for the hospital.

Here are some modules:

Accessibility Module

Patient healthcare, Admission, agendas and appointments, e-health services, etc.

Healthcare Module

Consultations, casualty, hospitalization, day hospital, etc.

Departmental Module

Radiology, laboratory, dietetics, blood bank, pharmacy and rehabilitation, records, etc.

Data Management Module

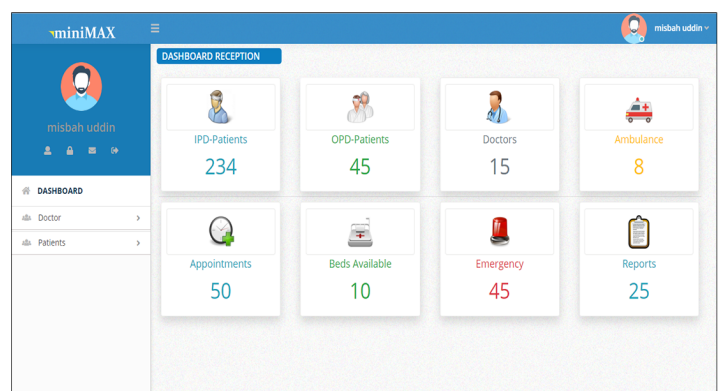

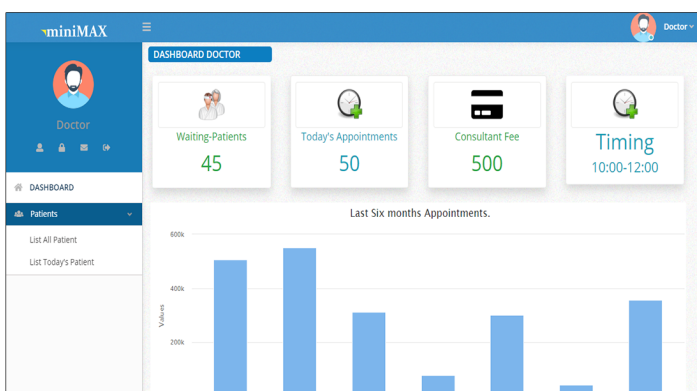

Top management control panel, data warehouse, medical indicators, etc.

Medication and Appointment Reminder

Set and receive automated reminders in the app.

Track Your Appointment

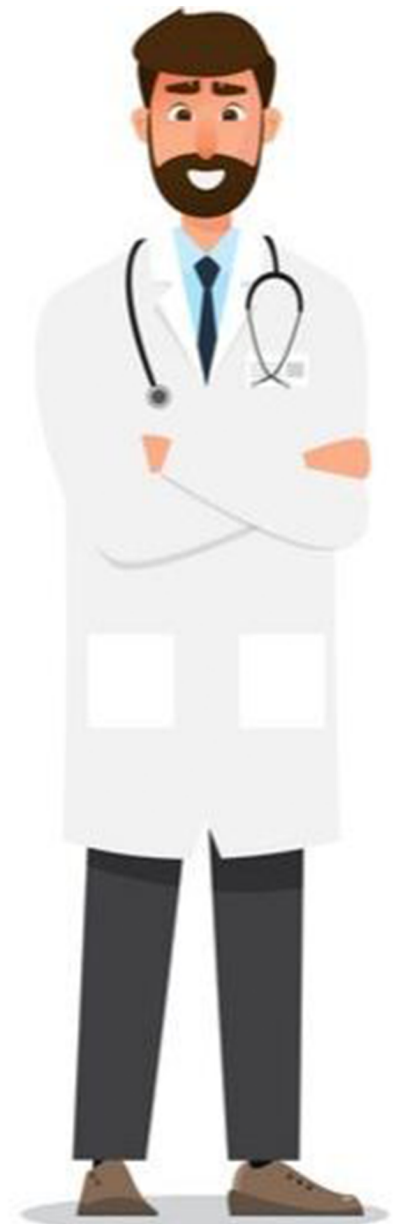

Utilize a user-friendly pain tracker and treatment tracker to assess progress.

Advantages:

- Achieve good quality ratings
- Cost reduction
- Keeping Hospital connected using the internet
- Medical report creation support
- Most advanced facilities provided
- Stored data protection
- Avoid errors and track every single detail
- Superior reception management
- User compatibility
- Better revenue management
- Work as contemporary turnout machine
- Establish your hospital as technically advanced
